

Tanvir Bhachu

Full-Stack Web Developer

Perth, Australia
tbhachu2@gmail.com

EXPERIENCE

Triton Digital, Remote — *Frontend Developer*

October 2022 - September 2024

Worked on multiple projects, and shipped a couple major features. The tech stack was mainly React, TypeScript, GraphQL and Styled Components. It was an enterprise environment, requiring working with multiple teams across multiple timezones.

EDUCATION

Murdoch University, Perth — *Computer Science*

February 2022 - October 2022

Bachelors in Computer Science but dropped out since it was pretty easy and I got a proper web developer job. Experience is more useful than education.

PROJECTS

Jadebook — *Open Source*

This has been a huge project for me. After my Triton Digital job, I wanted to build something of my own. Jadebook is a journal platform that was built as a SaaS and also has an open-source version. Its scope included everything from encryption, backend, auth, AI, theming, and much, much more.

Web Agency — *Side Projects*

I've built a couple professional sites on the side. These websites were for either service-based business or local businesses like flooring companies or furniture stores. These websites were built with NextJS and include using MedusaJS or SanityCMS.

Main Tech Stack

NextJS, React, TypeScript,
PostgreSQL, TailwindCSS,
Hono

AWARDS

Young ICT Explorers

Second in a national competition. Built a web app demonstrating the potential trajectory of a hurricane in real-time using machine learning through Python
